

Seamless data migration for SimCorp Dimension

OUR ASSIGNMENT

Data migration was a crucial step for our client in changing the portfolio management system to SimCorp Dimension (SCD), as it directly influenced other business units. Our client set high standards for data quality, with multiple data sources to aggregate.

We conducted an in-depth analysis of the client’s data sources and stakeholders, enabling us to understand their business logic. This enabled us to propose a comprehensive solution for migrating existing data and creating new items, ensuring a smooth and efficient transition.

Approach and Tools	Value Realization	aietes Expertise
<div></div> <ul style="list-style-type: none">• Gather the list of items needed by the client and the data source• Propose a correct structure based on the client's requirements• Analyse the constraints from SCD and define the correct import strategy• Build the import files and import configuration• Post Go-Live support	<div></div> <ul style="list-style-type: none">• Reference data created in line with business needs• Proposition of adequate data structure to meet business needs and SCD constraints• Improved data quality and consistency checks• Creation of interfaces and documentation• Smooth Business-as-usual phase	<div></div> <ul style="list-style-type: none">• Agile project management (SCRUM Master)• Business Analysis• Solution design• Requirement implementation• End user training
