

Increased efficiency through a new Market Data Hub

OUR ASSIGNMENT

The volume and complexity of market data is constantly growing. ESG trends are significantly expanding the data universe, while outdated systems are often not scalable and cause high costs. The goal of this project was to implement a modern market data hub that covers all relevant data types and connects providers and recipients.

We consolidated requests to avoid duplicate data and to save costs. With a management cockpit, we offered full transparency of procured and delivered data, established data quality standards, and outsourced standard activities.

Approach and Tools	Value Realization	aietes Expertise
 <ul style="list-style-type: none">• Hub as data source: enterprise data management solution from an external provider• Target system: SimCorp Dimension• Approach: Outsourcing and centralizing the originally used direct market data connections to an external service provider and then connecting SimCorp Dimension to this single source	 <ul style="list-style-type: none">• Cost reduction• Higher efficiency• Centralized and standardized data with higher quality• Higher automation & synergy effect through outsourcing	 <ul style="list-style-type: none">• Business analysis and implementation in SimCorp Dimension• Vendor management / external provider steering• Data management & testing• Project management
