

Programm Management & SME Support - SCD SaaS

OUR ASSIGNMENT

Replacing the client's legacy architecture and multi-system landscape for liquid assets with SimCorp Dimension Software-as-a-Service (SCD SaaS), aietes played a central role in program management, providing front-to-back expertise. We assisted the client and SimCorp in establishing robust project governance based on agile principles.

The goal was to increase scalability, improve operational processes, and optimize system interaction. In doing so, we consolidated various systems and enhanced operational security. The initiative was supported by our subject matter experts (SMEs) across different areas and SimCorp Dimension (SCD) modules

Approach and Tools	Value Realization	aietes Expertise
<div></div> <ul style="list-style-type: none">• Development of governance along agile principles• Progress tracking facilitated with Azure DevOps• Conduct of cross-team and steering committee meetings as well as cut-over planning• In-depth module-specific SimCorp Dimension know-how to facilitate clients requirements-gathering	<div></div> <ul style="list-style-type: none">• Aligned product backlog between SimCorp stream leads and product owners• Progress tracking on daily basis through daily stand-ups• Increments are checked by functional unit testing• Approval based on final review meetings• Delivery tracking through the whole project life-cycle	<div></div> <ul style="list-style-type: none">• Expert stakeholder management and communication across all levels• Successful projects driven by a team of skilled project managers, business analysts, SimCorp Dimension configurators, and accounting experts• Seasoned professionals adept at addressing all project phase-specific challenges
